II- READING COMPREHENSION

Read the text below then answer the questions.

26 Oluremi desina Street
Ikeja, lagos.
19th June 2000.

The Director,
Environmental Protection Agency
18 Creek Road
Yaba, lagos.

Dear Sir,

Environmental pollution of my area

I'm writing to formally bring to your attention the environmental pollution of my area which has made life unbearable for the people of the place. Our environment is highly polluted to the extent that breathing has become difficult. The air we breathe in and out is heavily polluted and the community stands the risk of an epidemic outbreak.

Refuse is dumped indiscriminately by the roadside and human faeces and toxic waste are emptied into the nearby stream.

As a result of this the stream which was flowing before is now stagnant, thus becoming a breeding place for mosquitoes. What further complicates the whole situation is that some illiterate women do go to this stream to fetch water they use for cooking and other domestic chores. Some even drink the water from the stream. This has constituted a health hazard in the area as an epidemic can break out from this unhealthy condition and before we know it, many lives will be lost.

The textile and the iron-smelting companies in our area have further worsened the situation as their furnace emit dark smokes into the air every day. On every working day, our environment is highly polluted with smoke which makes breathing difficult for us. We only have respite at week-ends when these companies are not working. The toxic water coming out of the textile factories is another source of environmental pollution. Though the toxic water flows into the nearby canal, it leaves behind a greenish stain on the side of the gutter and I know it must be emitting some poisonous gases into the air.

We are prone to a lot of health hazards, to say the least, and we want the government to come to our aid. This is very necessary in order to avert an outbreak of epidemic in the area.

Yours faithfully
